 THE CASH GROCERY OF EL PASO

CHINESE GIRLS AS GRADUATES

Four girl graduates of the Chinese public school at No. 29 Mott street, in New York. A class of 40 was graduated, 36 boys and four girls. The graduating class exercises were probably unique in New York as everything was spoken, recited and sung in Chinese, the address of principal Chu was in Chinese and even the music was Chinese.

land office. There was a large volume of testimony taken and numerous maps and exhibits were introduced in evidence. District attorney Frank J. Wright represented the territory and Wilson & Walton the mining company. The territory contends that the mines are on school ground and asks to be allowed to select other land in lieu thereof.

WORKINGS IN ONE MINE 200 MILES

Great Property of Phelps-Dodge Company in Sonora Is Very Rich.

Six miles from Nacozari, Sonora, Mexico, the terminus of the railway running south from Douglas, Ariz., in the great Pinalos copper mines, owned by the Phelps-Dodge Copper company, one of the subsidiary holdings of Phelps, Dodge & Co., there are 200 miles of workings.

Like the mines of Cananea, its ore bodies were so immense as to warrant as well as necessitate the building of a railroad. The tonnage of ore produced last month amounted to about 37,000 tons. The high grade ore, of which there are great quantities, is shipped to the Copper Queen smelter at Douglas; the low grade, carrying sulphides, is concentrated in the mill at the property, and the concentrates then shipped to the same smelter.

Development and Ore Bodies. Besides the 200 miles of workings, there are two great shafts, one called the Pinalos, the other the Esperanza, both of which are operated by the tunnel system through which the mine is drained. Electric motors are used to haul the cars from the underground workings to the surface.

The ore body of the Pinalos mine is said to be the second largest in the world, and there is enough ore in sight for constant extraction for the next half century.

The cut and fill system of mining is employed, filling up within six feet of the back, and then six feet of ore is extracted, making about 12 or 13 feet out after it is finished. The fills are run through raises. Machine drills are employed, and work is in progress in all the levels.

A large power plant and four large boilers with automatic stokers are features. The company will install a new electric hoisting engine and a 25,000 cubic feet air compressor. The company has one of the best equipped stores in northern Sonora under the management of C. H. Melcher, formerly of El Paso, also a large hospital capable of handling over 2500 patients. J. S. Williams, Jr., is superintendent of the old Aberdeen shaft, and the new shaft, the Pinalos, is under the management of C. I. Shultz, formerly of the Esperanza side of it.

MINER'S CHEST RESUMES IN LORDBURG DISTRICT.

Cor. Lord of Ore Is Shipped Daily—Found in Peace Mine—New Company Enters Mining Field.

Since the resumption of operations at the Miner's Chest mine, in the Lordsburg district, New Mexico, under the management of S. W. Mattheis, steady shipments of ore averaging a carload daily have been maintained. The Miner's Chest is one of the oldest mines in the Lordsburg district with a good past shipping record. The ore is copper and gold in a silicious matrix. There is a large tonnage of ore blocked out above the fifth level.

The Pence Mining company, in same district, has encountered a heavy flow of water in the deepest workings of the old Aberdeen shaft at a depth of 500 feet, necessitating suspension of operations until the arrival of a larger pump and additional power equipment. A car load of machinery has been transported to the mine from Lordsburg, and when installed the mine will be in active operation again.

In the same district several thousand dollars worth of machinery is being shipped to the Atwood properties, acquired by Leber and Cook, who have organized a new company called the American Beauty Mining company.

NEW MINE SUPERINTENDENT. Stanley C. Sears, a mining engineer, has taken control of the mines and mills of the Mexican Consolidated company at San Pedro, above Guaymas.

RICH TIN ORE IN NEW MEXICO MINE

Analysis Shows 68 Percent Value in Property Near Nutt Station.

In the Mack's mining district eight miles west of Nutt, a station on the Santa Fe railroad, between Rincon and Deming, N. M., a discovery of tin ore has been made in the Dude mine, an old property familiar to the oldtimers in that part of New Mexico. The property has been worked for over 20 years by different owners and lessees for silver and lead contents. It is in the extreme southwestern part of Sierra county. Lately the mine has been acquired by the Good Luck Mining company, a Philadelphia, Pa., concern, and is under the management of E. J. McKenna.

The development work consists of one shaft 200 feet deep and another 300 feet deep, sunk 200 feet apart, which are connected by a drift at the 200-foot level. On the 200-foot level there is over 500 feet of drifting. The tin ore resembles black zinc blende in appearance, and under this mistaken idea the ore was thrown over the dump, as the old time miners had no use for zinc. But in sinking from the 200 foot level the ore became so abundant, the vein being eight feet wide, that an analysis of the ore was thought advisable; and superintendent McKenna sent samples of it to Philadelphia. Greatly to the surprise of all it was found to contain 68 percent tin. Other later assays gave 68 percent tin.

Preparing For Concentration. The Good Luck company is preparing to install a heavier hoisting plant and a concentrator to treat the tin contained in the dump. The company owns 13 claims. The Dude lode is very wide on its outcrop, being in places over 200 feet wide. Adjoining the Dude group are seven claims covering the extension of the same lode, owned by Mack's Mining company of Chicago.

DEVELOPMENT WORK HEAVY IN MOGOLLON DISTRICT

Deadwood Mines Are Unwatered; Ernestine Mill Resumes Operations; Pipe Line Nears Completion.

Mogollon mines shaft has been unwatered and sinking has been resumed. Portions of the old workings, recently caved, have been cleaned out and the old Aberdeen shaft is being refilled. Arrangements for the erection of their mill are about completed and grading will be started soon.

The Oaks company has acquired another group of valuable claims on the Ernestine Mining company's mill has resumed operations, after a three-weeks' shutdown, during which numerous repairs and improvements have been effected.

At the Mogollon Gold and Copper company everything points to an early adjustment of finances, following which will be renewed activity on their several properties in the district.

A large part of the Helen Mining company's crew, engaged the past three months installing a pipe line up White-water creek, above Graham, has been dispensed with since the power feature has centered itself to requiring only a few skilled mechanics to complete it. A large crew is rapidly getting the mine in condition for production.

WORK PROGRESSES ON BIG MILL AT PARRAL

First Unit Almost Completed; New Power House Work Is Pushed; Electricity Will Be Used.

Work on the concentrating mill of the Palmilla Milling company at Parral, Mex., is progressing rapidly and the first unit of the 1000 ton mill is nearly completed. The steel men will be through with their part of the construction work in two weeks. The new power house is about completed and a gang of workmen is busily engaged installing the big machinery.

In the mill, the machinery is in-

stalled and work is now being pushed in installing the big tanks. The machine shop is rapidly assuming the appearance of a modern machine and repair shop, and the entire camp is one of the busiest places in that section. The machinery will be electrically driven from one large motor. The mill will be ready for operation by the end of September.

NOGAL AND WHITE OAK MINE DISTRICTS ACTIVE

Mill Treats 20 Tons of Gold Ore Daily; Find of \$1400 Gold Ore Is Reported in New Mexico Property.

The Eagle Mining and Milling company has opened up its mining properties at Parsons, in the Nogal mining district east of Oscura, N. M., and the mill, which is running with two shifts, is treating 20 tons of gold quartz daily. There are millions of tons of low grade ore containing low grade values.

The Vera Cruz mine, near Nogal, N. M., has been leased for seven years and new machinery is being installed. The Commercial Metals company is working two shifts of men in its shaft in rock so hard that the steel flies to pieces in drilling. This property is east of Carrizozo.

White Oaks District.

The Old Abe, the North Homestake and Rita mines are being steadily worked. Christ Yaeger is working a force of men in the Crosscut tunnel of the Miner's Cabin and taking out ore showing good gold values.

It is reported that a vein of extremely rich gold ore was struck in the North Homestake, running \$1400 gold per ton.

In the White mountains at Lincoln, some high grade gold quartz has lately been discovered in the White Range mine, acquired by George Ulrich and W. W. Grow, of White Oaks, N. M.

RICH POCKETS OF NATIVE SILVER IN GUANACAVI MINES.

Reports from the old mining camp of Guanacavi, Durango, Mex., states that there is considerable excitement over a rich discovery in the Chamola mine recently uncovered. It is supposed to be a parallel vein but which had not recently been exploited. The uncovered ore is so rich that the first three sacks netted 49 kilos silver and two and a half ounces gold.

A couple of years ago a pocket was encountered from which was taken a large quantity of native silver, resembling white silk floss or spun glass, some of it over two feet long. The battery of these samples was not appreciated and the discoverers sold it at the ordinary market price of a peso per ounce. For cabinets and jewelry purposes it was easily worth more than its weight in gold.

GREENE-CANAVEA PLANT IS BEING GREATLY ENLARGED.

With the completion of improvements now under way, the possible capacity of the Greene-Canavea reduction works will be 8,000,000 pounds of copper per month, according to a statement of L. D. Ricketts, president and general manager. A second reverberatory furnace is now building, and a battery of five additional boilers will be installed in connection with it; six additional McDougal roasting furnaces have been ordered; two additional 1200 k. w. turbines are under contract, and the mines not yet equipped with electric pumps and hoists will soon have them.

A total of 1,016,536 tons of ore was treated last year. The average copper recovery was 2.266 percent, of silver 0.75 oz., and of gold 0.0046 oz. per ton.

DEVELOPMENT WORK ON OROGRANDE MINES

Orogrande, N. M., July 25.—A contract has just been let on the Amarillo shaft for 50 feet, and on the Molite Gibson for 25 feet on the property of the Eureka Mines company, controlled by W. W. C. Spencer, of Boston. This

Important to All Women Readers of This Paper

Thousands upon thousands of women have kidney or bladder trouble and never suspect it.

Women's complaints often prove to be nothing else but kidney trouble, or the result of kidney or bladder disease.

If the kidneys are not in a healthy condition, they may cause the other organs to become diseased.

You may suffer a great deal with pain in the back, bearing down feelings, headache and loss of ambition.

Poor health makes you nervous, irritable and may be dependent; it makes any one so.

But thousands of irritable, nervous, tired and broken down women have restored their health and strength by the use of Swamp-Root, the great Kidney, Liver and Bladder Remedy.

Swamp-Root brings new life and activity to the kidneys, the cause of such troubles.

Many send for a sample bottle to see what Swamp-Root, the great Kidney, Liver and Bladder Remedy will do for them. Every reader of this paper, who has not already tried it, may address Dr. Kilmer & Co., Binghamton, N. Y., and receive sample bottle free by mail. You can purchase the regular fifty-cent and one-dollar size bottles at all drug stores.

work is under the supervision of S. Howard Leech, and the contracts have been taken by C. K. Hartley and associates. The work has already started.

Judge Dunklin, of Ft. Worth, is now in the camp looking after his placer mill, which is in operation just below the reservoir.

KELLY SHIPS GOLD BRICK—ZINC COMPANY OPERATES MILL.

Kelly, N. M., July 25.—The weekly gold brick from the Rosedale mill at Kelly, N. M., runs in value from \$4000 to \$5000. Shipments are made to the New Orleans mint.

The Ozark Zinc company, at Kelly, is operating its 100-ton mill and shipping the concentrate east. The German and Tri-Bullion companies are in full operation in the same camp.

NEW MEXICO BORAX AND ALUM DEPOSITS LARGE.

A. S. Rosenberg, of the United States reclamation service, who is examining the deposits of mineral salts at the head of the Malpais, west of White Oaks, N. M., reports the presence of large quantities of borax. He will also examine the alum deposits near Oscura, in the Phillips hills, and a government bulletin will be issued later.

BIG ALUMINUM DEPOSIT REPORTED NEAR ROSWELL.

An immense deposit of aluminum is reported from Riverside, nine miles northeast of Roswell, N. M., on the banks of the Pecos river. Analysis shows 13.4 percent aluminum; 3.8 percent iron oxide; 68.8 percent silica, and 3.8 percent lime. The clay is excellent for making high grade brick and tile.

MINES WILL NOT SHUT DOWN.

Bisbee, Ariz., July 25.—Following the published report that the Calumet & Arizona Mining company was about to shut down the Irish Mas shaft, where a force of 450 miners is employed, superintendent Goehring stated in an interview with The Herald's correspondent here "There is absolutely no truth in the rumor to the effect that there is to be any shutdown in the mines of our company. I should be pleased if the El Paso Herald would state that the report of a shutdown is only a fantastic and ridiculous speculation."

EL ORO DEVELOPMENTS.

The report of the general manager of the El Oro Mining company, of El Oro, Mexico, for the last six months shows that from \$8 to \$20 ore is being taken from the lowest levels of the mine. Exploration has been going forward in all the ore bodies opened, resulting in the development of ore ranging from \$6.50 to \$30 per ton.
